## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. The following is an examiner's statement of reasons for allowance per MPEP 1302.

2. Claims 28-30 are deemed to be directed to a non-obvious Improvement over Shotmeyer (3908690) and Koyama (4966522).

Claim 28 is drawn to an apparatus for attachment to an inlet end of a conduit in fluid communication with a remote pump for removing liquid from a pool of liquid. The apparatus comprises a pair of shallow ovoidal sections each section having a substantially elliptical crosssection to provide laminar flow. First and second series of coaxial peripheral ribs extend from an interior surface of the ovoidal sections. In addition a hinge assembly connects the pair of ovoidal sections at adjacent peripheral edges of each section along the central diameter of the hollow body. The pair of sections form a single elongate opening about a majority of the central diameter of the hollow body. The single elongate opening will ingress liquid when the pump is in operation.

Shotmeyer discloses similar apparatus for ingressing fluid to a remote pump. Shotmeyer's apparatus however lacks a single elongate opening about a majority of the hollow body. In addition Shotmeyer's apparatus fails to show also coaxial peripheral ribs and a hinge assembly connecting the pair of sections.

Koyama teaches a very similar liquid ingressing device to that of Applicant's invention but lacks a single elongate opening about a majority of the hollow body

Art Unit: 3746

and also fails to show coaxial peripheral ribs and a hinge assembly connecting the pair of sections.

Thus In the examiner's opinion, it would not have been obvious to a person of ordinary skill in the art to at the time the invention was made to modify the ingressing device of Shotmeyer by Koyama to arrive at Applicant's invention since the prior art of record fail to teach what is lacking in Shotmeyer's device.
